Projects

Validation library

Utility for data validation, published to npm. Makes use of Promises, array methods and recursion in order to achieve a highly abstract API. Features object and array validation, custom validators and optional fields. See [the documentation](#).

Blog platform

A website for anyone to sign up and write. Features tags, draft posts, comments and replies. [The client](#) is built with Next.js using server side rendering and it's connected to a [Node.js API](#). Styling is done using CSS modules.

Articles

Async JavaScript

In this three part tutorial series I explain everything one needs to know in order to start using AJAX. Read the [first article here](#).

CSS Layouts

In this article I present three interesting layouts and explain the steps to achieve them using CSS. You can [read it here](#).

Technologies

Languages

- HTML
- CSS & SCSS
- JavaScript (ES6+) & TypeScript
- GraphQL

Front-end frameworks

- React
- Gatsby.js
- Next.js

Back-end tech

- Node.js
- Express
- MongoDB & Mongoose

Tools

- Linux terminal
- Git & GitHub
- Npm & Yarn

About

I'm an aspiring web developer passionate about creating great software - anything from intuitive user interfaces and well-organized APIs to neat utilities that get stuff done. I usually work on web applications in React but I'm also good at vanilla JavaScript and crafting responsive websites. Moreover, I have experience in writing Node.js apps.
